

SOFTWARE USAGE OPTIMIZATION SUCESS STORY

TESTIMONIAL → HACEB

Haceb is a Colombian company with 79 years of experience in the market, dedicated to manufacturing home appliances. We are recognized for our model of excellence, based on three fundamental pillars: innovation, competitiveness, and leadership.

In our growth and expansion process, we faced several challenges as a company, specifically from the area of technology and information, we faced two: One, to certify that our Microsoft licensing was 100%, and two, to analyze our security strategy to see how vulnerable we were to possible cyber-attacks.

From the moment Echez Group understood these challenges, they began to work with us in an in-depth analysis to ensure the correct licensing of our Microsoft software platform and to help us validate our prevention strategy against cyber-attacks. They made sure all our policies were properly implemented, preventing any future attack which could put at high risk the stability of our business and the satisfaction of our customers.

In this project, we worked from different fronts outlining four main objectives: The first was to establish a solid foundation for IT asset management, and the second objective was to define the best path for migration to the cloud in a secure manner. The third was to establish a solid foundation to protect IT assets, and the fourth objective was to mitigate risks related to financial and security elements and to have a more solid, robust, and secure IT infrastructure, which would allow us to protect ourselves against an eventual intrusion.

After executing this project, we felt the peace of mind of complying with Microsoft licensing policies in their entirety; we developed a plan and policies to prevent cyber-attacks and began our digital transformation process, which allows us to guarantee a quality service for our customers and employees

Natalia Molina - Technology and Information Manager

CLIENT PROFILE

Colombian company dedicated to manufacturing household appliances, with 79 years in the market. They are characterized by a model of excellence based on three fundamental pillars: innovation, competitiveness, and leadership.

CHALLENGES

To obtain 100% certification of its licensing and analysis of its security strategy to determine the company's vulnerability to cyber-attacks.

IMPACT

After implementing the software usage optimization solution, the client was able to:

- Mitigate risks related to financial and security elements, having a more robust IT infrastructure and defense against eventual intrusions.

SOLUCIONES

After implementing the solution, the company achieved the following:

- 100% compliance with software licensing policies.
- Implementation of policies to prevent high-level cyber-attacks.
- Establishment of a solid foundation for IT asset management.
- Preparing the company for the cloud security migration process.

RESULTS

The positive impact of the executed solution is demonstrated by:

The correct implementation of software licensing.

The validation of their cyber-attack prevention strategy.
